Backhaul Capacity

# YOUR SOURCE for Backhaul Capacity

## WHO WE ARE

Private fleets are consistent, dependable and predictable. Private Fleet Backhaul is a 3PL with exclusive focus on matching and managing the movement of your high volume truckload freight via the backhaul capacity of private fleets in our network. We'll move 21,000+ loads this year via our 500+ private and dedicated fleets. Our network includes 25% of the Top 100 Private Fleets, 60+ proud members of the National Private Truck Council and 8 of the Top 10

largest for-hire dedicated fleets. Our average lane moves 4.3 times per week, is 242 miles and employs a trailer pool. We have never used a load board in the history of our company, we do not move transactional loads, and once we accept your tenders, we own them.

## WHAT WE DO

We match your freight lanes with private fleets that have a repetitive synergistic backhaul move. Due to the stable and predictable nature of their backhaul

capacity, where we identify strong matches, our private fleets enable us to meet our tender acceptance commitment, provide high service levels and competitive pricing. While our database includes the combined backhaul capacity of over 500 private and dedicated fleets, Private Fleet Backhaul owns your shipments and is your sole point of contact, from pickup to delivery.

## HOW WE DO IT

Using your origin:destination points, we query our database of literally thousands of repetitive backhaul lanes and where potential matches are identified, we work with our private fleets to firm up capacity and develop pricing for your consideration. Where pricing meets your criterion, we work closely with your team to coordinate and execute the implementation and then proactively manage the ongoing activity.
